Jenny Scott is happily married to her husband, Greg. She has a dream job at Taylor Myers, a Seattle investments firm, and is about to have her first initial public offering (IPO). Everything is perfect. Or is it?

She can't help but think about her friend Cabot McAvoy's warning to be cautious when dealing with others in the firm and to not always believe what she's told. When she discovers someone has gone through her desk, looked at some of her files, and later discovers a mysterious file on her computer that she can't open, her suspicion grows that she is being set up to take the fall for some sinister happenings at the firm.

With the help of her assistant, Alex, she takes on the unscrupulous, greedy bad characters, who she discovers have already murdered two people that got in their way. After a spine-tingling office break-in and a harrowing car chase, they eventually find out what has "really" been going on.

Helen Christine is a fine writer and spins a great story of greed, dishonesty, corruption, and murder in the securities industry. It has a surprising and satisfying ending. The characters are well-defined and interesting. I enjoyed reading this book, and I recommend it to anyone who likes to read a story that is both a thriller and a page turner.
